

Proven Drug Delivery Expertise

Your leading transdermal CDMO

Kindeva Drug Delivery is the only CDMO that offers multiple options to deliver drugs to and through the skin.

50+ years of transdermal expertise

We have developed, tech transferred, and commercialized several NDA and ANDA products over the past 50 years.

Since our invention of the drug-in-adhesive technology in 1970, we have made impactful innovations including:

- Patches with wear periods up to 7 days
- Novel patch overlay systems
- Highly conformable film-forming transdermal gels

End-to-end capabilities

Our end-to-end formulation, development, manufacturing, and analytical capabilities span all your needs. By leveraging materials expertise, regulatory experience, and industry relationships, we ensure an optimized product journey from prototype to commercial scale.

A broad spectrum of platform technologies

Our expertise includes:

Single-layer drug-in adhesive patches

Active gel patch formulation
(applied as a gel, dries to discreet waterproof film)

Medical- and pharmaceutical-grade coatings

Multilayer drug-in adhesive patches

Customizable patch design and geometries

Topical tapes

Comprehensive services

At our cGMP facilities, we provide:

- Automated precision coating
- High-efficiency converting technology
- Packaging, cartoning, and serialization capabilities
- Finished and intermediate product configurations
- Handling of potent compounds and controlled substances

Vertical and horizontal integration allows streamlined access, simplifying your supply chain and accelerating your time line.

Analytical services

We offer extensive analytical support that spans your product's full life cycle, including raw material testing, method development and validation, extractables & leachables, performance and functional analysis, and feasibility and compatibility.

Unrivalled customization

Leverage an unmatched breadth and depth of transdermal know-how, with extensive knowledge of complex dosage forms. We have benefited from first-hand access to skin-friendly adhesives and component materials from our history as 3M which allowed us to successfully develop and commercialize multiple transdermal patches. Utilizing our formulation expertise, we customize patches that can be worn for a variety of time periods, including novel integrated overlay systems for up to one week of wear.

Choose a flexible CDMO partner

Our approach is responsible, flexible, and collaborative. We offer a variety of partnership models that allow for successful contract development and manufacturing collaborations. We are your comprehensive, dynamic partner to bring your mono or combination therapy to market.

COMBINE FORCES WITH KINDEVA

Kindeva Drug Delivery is a leading global powerhouse CDMO for sterile injectable, pulmonary, nasal, transdermal, and intradermal finished dose. We are committed to manufacturing more tomorrows for our customers, colleagues, and patients around the world. We deliver unrivalled expertise across development, manufacturing, and comprehensive analytical services for a broad range of drug-delivery formats. Through strategic investments in cutting-edge technology, we proactively tackle critical industry challenges, including expanding aseptic injectable fill-finish capabilities and leading the way in green propellant initiatives. Combining forces with a diverse global client base, Kindeva operates state-of-the-art manufacturing, research, and development facilities across the U.S. and U.K.
